PROFILE

4th year student at Epitech Nantes, France premier IT school.

Exchange student at San Francisco State University in graduate computer science.

Mainly interested in cloud and AI, but also discovering new fields.

Currently creating an app to understand pets using AI, and an Apple Vision pro project to discover San Francisco.

WORK EXPERIENCE

Backend engineer - Internship

Lumiplan, smart city

February 2024 – June 2024

Created an internal application to centralize interface contracts used in microservices, improving team efficiency by reducing time spent on integration issues by 20%, using full-stack programming (Java, Python, TypeScript) to manage both synchronous and asynchronous services.

Programming teacher

ISEG, marketing school

January 2024

Taught web programming (HTML, CSS, PHP) to first-year marketing students, by creating engaging, hands-on projects tailored to their marketing needs.

Backend engineer - Internship

Hipay, payment software

July 2022 – December 2022

Created an internal application to manage data exports between departments in a more optimized way, reducing transfer times by 30%, using web-oriented programming (Node.js, Express, TypeScript) and cloud technologies (GCP, Terraform).

PROJECTS

Apple Vision SF  2024

Creation of an application for apple vision, designed to help people discover the city of San Francisco, via a street view-style 3D map, and immersive videos of important places.

Real Time Translate  2024

Creation of a real-time translator, using the Gladia and Deepl APIs, in Node.js

Area  2023

The AREA is a platform that allows you to automate your digital life. It is a web/mobile application that allows you to create automations between your favorite applications. For example, you can create an automation that will send you a message on Slack when you receive an email from a specific sender.

EXTRA-CURRICULAR ACTIVITIES

Volunteering from 2019 to present

- Web2Day 2022/2023
- DevFest 2021/2023
